

Securing Your Data is Our Business™

PacketSure Managed Data Loss Prevention™

Business Challenge

Organizations large and small share the same requirement: to keep sensitive and confidential information from leaving their networks. Small organizations however, are presented with limited funds for capital expenditures and information technology teams are stretched thin, which creates a barrier to deploying and managing additional technology. With sensitive data loss on the rise, small organizations are turning to their trusted Managed Service Providers for the right solution to protect their confidential data.

The Solution

Palisade Systems® Inc. is the first to answer the call for both Managed Service Providers and their valued customers. The award-winning PacketSure DLP™ prevents prohibited content from leaving the network over email, instant messaging, file transfer, web sessions, and more. With Palisade PacketSure Managed DLP™, Managed Service Providers can now offer their customers the same opportunity and flexibility to receive the comprehensive protection, while maintaining minimal operational expenditure.

PacketSure Managed DLP™ Service Options

Monitoring Service

This service is designed to provide organizations the visibility into data leaving their network by delivering scheduled reports.

- Pre-built policies to monitor for PCI, HIPAA, GLBA compliance data
- Comprehensive reporting on a scheduled basis
- Incident threshold responses

Managed Service

This service is for organizations who wish to remediate proprietary data before leaving their network.

- Custom policy set-up and management
- Secure Remote Access into comprehensive reporting
- Incident threshold responses
- Remediation on SMTP, HTTP, HTTPS, and IM traffic
- Integration with gateway encryption solutions.

Ease of Installation

Deployment in a multi-tenant environment, leveraging industry-standard platforms and tools. Flexible wizards to configure policies quickly and easily.

Ease of Management

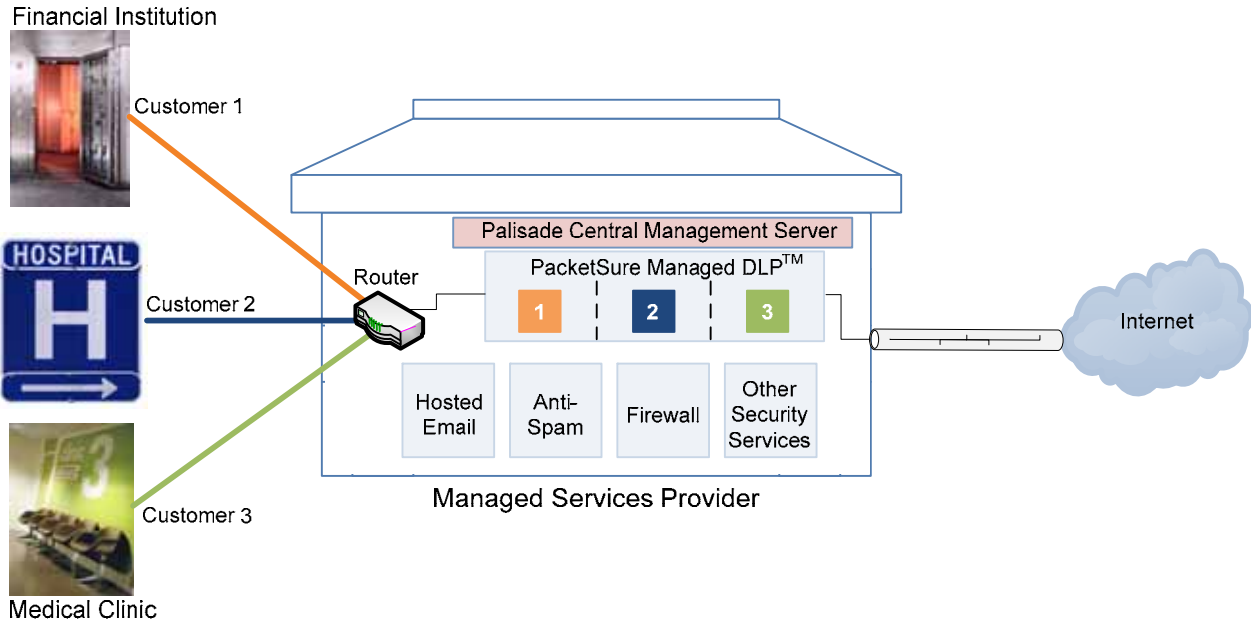

Easy-to-use interface reduces the complexity for security administrators, which saves time and maximizes profits.

Add-on Functionality

Eliminate applications and protocols with patented technology. Manage and report on web usage with URL filtering technology and database.

Feature	Benefit
Rapid Deployment	PacketSure Managed DLP™ is quickly installed on industry-standard VMWare Virtual Machines.
Ease of Configuration	Each customer's environment can be configured in less than 45 minutes, allowing busy network administration staff to move on to their next project.
Granular Administration and Security	Each Virtual Machine maintains its own administrator privileges, as well as its own database of customer data. Customers receive complete compartmentalization of their configuration, reports, and data while Managed Service Providers receive the cost benefit of multi-tenant software and hardware.
Custom DLP Policies	Custom tools in the form of pattern matching, data base content matching, file fingerprinting, and compliance templates are utilized to create policies specific to an organization's confidential data.
Real Time Alerts	This configurable option can be used to notify the appropriate security administrator when a policy has been violated, customizable on a customer by customer basis
Policy Notifications	Notifications can be sent to end users who violate policies over corporate email (SMTP). The content includes the remediation that was taken and what specific policy it applies to.
Integration with Encryption Solutions	PacketSure Managed DLP™ can be configured to integrate with an existing or third-party gateway encryption engine. Messages can be re-routed to a specific IP address or port number, as well as adding or modifying headers of the email.
Access restrictions	The integration with Active Directory allows for department-specific DLP policies and granular access restrictions to specific applications/protocols and websites.
Flexible reports	PacketSure Managed DLP™ provides real-time reporting, dashboards, canned and custom reports. All reports can be saved, scheduled, emailed or downloaded.
